                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                         Sequence 17, Application US/08207904

Patent No. 5477002

GENERAL INFORMATION:

APPLICANT: Tuttle, AnnMarie

APPLICANT: Crossland, Lyle D.

TITLE OF INVENTION: Anther-Specific cDNA Sequences, Genomic

TITLE OF INVENTION: DNA Sequences and Recombinant DNA Sequences

NUMBER OF SEQUENCES: 21

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100.0%; Score 40; DB 1; Length 448; 100.0%; Pred. Sequence 10, Application US/07901707

Patent No. 5376546

GENERAL INPORMATION:
APPLICANT: Berter, Marc J.
APPLICANT: Carroll, Steva F.
APPLICANT: Lane, Julie A.
TITLE OF INVENTION: Materials Comprising and Methods of
TITLE OF INVENTION: Composition and Use for Ribosome-Inactivating Proteins
NUMBER OF SEQUENCES: 57
CORRESPONDENCE ADDRESS:
ADDRESSE: Marshall, O'Toole, Gerstein, Murray &
CORRESSE: Bickell:

Sequence 10, Application US/08425336
Patent No. 5621083
CENERAL INFORMATION:
APPLICANT: Better, Marc D.
APPLICANT: Carroll, Stephen F.
APPLICANT: Studnika, Gary M.
TITLE OF INVENTION: Immunotoxins Comprising Ribsome-Inactivating
TITLE OF ENVENTION: Proteins
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

Sequence 10, Application US/OB477484B
Patent No. 5756699
GENERAL INFORMATION:
APPLICANT: Betret, Marc D.
APPLICANT: Studinks, Gary M.
TITLE OF INVENTION: Immunotoxins Comprising Ribosome-Inactivating NUMBER OF SEQUENCES: 169
CORRESPONDENCE ADDRESS:
ADDRESSEE: McAndrews, Held & Malloy, Ltd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               COMPUTER READALE FORM:
MEDIDID TYPE: Floppy disk
COMPUTER: IBW PC compatible
OPERATING SYTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: U$/08/477,484B
FILING DATE: 07-JUN-1995
PRIOR APPLICATION DATA:
APPLICATION NUMBER: U$/08/425,336
FILING DATE: 18-APR-1995
PRIOR APPLICATION DATA:
APPLICATION NUMBER: U$ 08/064,691
FILING DATE: 12-MAY-1993
PRIOR APPLICATION DATA:
APPLICATION NUMBER: U$ 07/981,707
FILING DATE: 09-DEC-1992
PRIOR APPLICATION NUMBER: U$ 07/901,707
FILING DATE: 19-JUN-1992
PRIOR APPLICATION NUMBER: U$ 07/787,567
FILING DATE: 04-NOY-1991
ATTORNEY/AGENT INFORMATION:
APPLICATION NUMBER: 32,918
REFERENCE/DOCKET NUMBER: 11022US07/200-70.P3.C2A
TELEPHONE: 312/70-9155
TELEFONMUNICATION INPORMATION:
TELEPHONE: 312/70-9189

hypothetical protein YUP8H12R.39 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 05-Feb-1999 #sequence_revision 05-Feb-1999 #text_change 22-Oct-1999
C;Accession: T01056
R;Theologis, A; Vysotskaia, V.S.; Osborne, B.I.; Schwartz, J.R.; Federspiel, N.A.; Kwan Oefner, P.; Davis, R.W.
submitted to the EMBL Data Library, May 1998
A;Description: Arabidopsis thaliana chromosome 1 YAC YUP8H12R sequence.
A;Reference number: Z14227
A;Reference number: Z14227
A;Accession: T01056
A;Status: translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Residues: 1-572 <THE>
A;Cross-references: EMBL:AC002986; NID:g2494106; PID:g3152598; GSPDB:GN00059; ATSD:YUP8H

Biol. 38, 1201-1214, 1998
A; Title: Anthranilate N-hydroxycinnamoyl/benzoyltransferase gene from carnation: Rapid A; Reference number: Z17092; MUID:99084770
A; Accession: T10711
A; Status: translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-446 <YAN>
A; Residues: 1-446 <YAN>
A; Cross-references: EMBL:Z98758; NID:e1309511; PID:e1309512
C; Function:
A; Description: catalyzes the synthesis of anthranilate
A; Pathway: phytoalexin biosynthesis
C; Keywords: acyltransferase; coenzyme A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A;Status: preliminary; translated from GB/EMBL/DDBJ

*Analysis of three 2,3-dihydroxybiphenyl 1,2-dioxygenases found in Rhodococcus globerulus p6. Identification of a new family of extradiol dioxygenases.*,

J. Biol. Chem. 269:7807-7815(1994).

-I- CATALYTIC ACTIVITY: BIPHENYL-2,3-DIOL + O(2) = 2-HYDROXY-6-OXO-6-PHENYLHEXA-2,4-DIEMOATE + H(2)O.

-I- COPACTOR: FERROUS ION.

-I- PATHWAY: DEGRADATION OF BIPHENYLS AND PCLYCHLOROBIPHENYLS (PCB) BENNOIC ACID AND CHLOROBENZOIC ACIDS.

-I- SIMILARITY: BELONGS TO THE EXTRADIOL RING-CLEAVAGE DIOXYGENASE

This invention describes a novel consensus sequence (I) for the identification of acyltransferase enzyme in plants. (I) comprises His-X_1-X_2-X_3-Asp-X_4 where X_1 = an amino acid comprising Ala, Arg, Thr. Cys, Asn, His, Met, Ile, Leu, Val or Lys; X_2 = an amino acid comprising Val, Ile, Leu or Met; X_3 = an amino acid comprising Cys, Phe, Val, Leu, Met, Ala, Gly, Ser or Thr; and X_4 = an amino acid comprising Gly, Ala, Ile, Met or Val. The invention also describes a novel method for the identification of acyltransferase enzyme in plants comprising: (a) the steps of (i) DNA amplification using PCR primers specific for (I) coupled to 3'- or 5'- RACE (rapid amplification of cDNA ends) protocols; (ii) direct screening of cDNA and genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313. This peptide fragment was isolated from three of the six clones and was used synthesise a degenerate primer (T37314) which was then used to identify other aromatic acyl transferase encoding clones.
                                                                                                                                                                                                             Novel

The anther specific promoter can then be cloned into a recombinant construct and used to express theterologous genes. Preferred heterologous genes include Diptheria chrysanthemi; T-urfl3 from cms-T maize mitochondrial genomes; the chrysanthemi; T-urfl3 from cms-T maize mitochondrial genomes; the chrysanthemi; T-urfl3 from cms-T maize mitochondrial genomes; the cynthetase gene from page Mu; the indole acetic acid-lysine crom Bacillus thuringiensis Israeliensis. All of these genes when campaignessed in anther tissue will result in the inability of the plant to produce viable pollen. Transformation of plants with such can recombinant construct can produce transgenic, male sterile plants. Can be sterillty is important in the production of hybrid seeds as it prevents self pollination which hinders breeding and hybrid seed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ashikari T, ruj-
                                                                                                                                                                                                                                                                                                                   Aromatic acyl transferase; transformation; anthocyanin pigme plants; acylation; colour; tone; colouration; colour change; Gentiana triflora; Petunia hybrida; Perilla ocimoides; Scenecio cruentus; Lavandula angustifolia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       W04727;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 4; Page 61-65;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA coding for aromatic acyl transferase - for transforming which produce anthocyanin pigments and thus altering colour

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313. NOTE: This sequence is supposed to cross reference with the nucleotide described in T37313, however there are so many discrepancies between the polypeptide decoded from that sequence and this polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vectors containing DNA fragments encoding proteins of plant origin with aromatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The aromatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA coding for aromatic acyl transferase - for transforming which produce anthocyanin pigments and thus altering colour e.g. of flowers

         Vectors containing DNA fragments encoding proteins of plant origin with arcmatic acyl transferase activity may be used to transform plants which produce anthocyanin pigments. The arcmatic acyl transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding arcmatic acyl transferase from different plants are described in T37308-T37313.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 transferase acylates the pigments in the flower resulting in colour tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in T37308-T37313.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                           comprising Val, Ile, Leu or Met; X_3 = an amino acid comprising Cys, Phe, Val, Leu, Met, Ala, Gly, Ser or Thr; and X_4 = an amino acid comprising Gys, Ala, Ile, Met or Val. The invention also describes a novel method for the identification of acyltransferase enzyme in plants comprising; (a) the steps of (i) DNA amplification using PCR primers specific for (I) coupled to 3' or 5' - RACE (rapid amplification of CDNA ends) protocols; (ii) direct screening of CDNA and genomic ilbraries using degenerate primers based on (I); (ii) screening of CDNA expression libraries using antibodies specific for (I); or (iv) screening of CDNA expression libraries using antibodies specific for (I); (v) identifying homology to the DAT gene family; and (d) identifying an open reading frame encoding a protein with a molecular weight between 45 and 54kDa. This sequence represents a plant acyl-transferase conserved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           10-MAR-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CA2231621-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Catharanthus
                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel consensus sequence (I) for the identification of acyltransferase enzyme in plants. (I) comprises His-X_1-X_2-X_3-Asp-X_4 where X_1 = an amino acid comprising Ala, if it is a maniferation of a cyltransferation and in the comprising Ala, if it is a maniferation acid comprising the compression and in the cylindrical compression and in the cylindrical compression and in the cylindrical compression acid compression acid compression acid compression acid cylindrical compression and cylindrical compression acid cylindrical cyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              acyltransferase enzymes in plants

especially where repeated delivery is required. Adenoviruses of the invention are useful can be constructed to have a desired host range and a diminished capability to raise neutralizing antibodies, an absence of, or decreased infection of, antigen presenting cells of the immune system (e.g. macrophages), and an ability to escape trapping in the liver through increased target cell specificity.
                                                                                                       chimaeric adenoviruses with reduced antigenicity. The chimaeric adenoviruses comprise at least part of a fiber protein of an adenovirus serotype providing the chimaeric virus with a desired host range and at least part of a penton or hexon protein from another, less antigenic, serotype. The chimaeric adenoviruses are useful for gene therapy,
                                                                                                                                                                         Y68642-70 represent the amino acid sequences of the fiber proteins of Adenovirus serotypes 8, 9, 13, 14, 20, 23, 24, 25, 27, 28, 29, 30, 32, 33, 34, 35, 36, 37, 38, 39, 42, 43, 44, 45, 46, 47, 48, 49 and 51. The proteins are used in the course of the invention to construct

                                                                                                                                                                                  Y68642-70 represent the amino acid sequences of the fiber proteins of Adenovirus serotypes 8, 9, 13, 14, 20, 23, 24, 25, 27, 28, 29, 30, 32, 33, 34, 35, 36, 37, 38, 39, 43, 44, 45, 46, 47, 48, 49 and 51. The proteins are used in the course of the invention to construct chimaeric adenoviruses with reduced antigenicity. The chimaeric adenoviruses comprise at least part of a fiber protein of an adenovirus serotype providing the chimaeric virus with a desired host range and at least part of a penton or hexon protein from another, less antigenic, serotype. The chimaeric adenoviruses are useful for gene therapy, especially where repeated delivery is required. Adenoviruses of the
                                                                                                                  invention are useful can be constructed to have a desired host range and a diminished capability to raise neutralizing antibodies, an absence of, or decreased infection of, antigen presenting cells of the immune system (e.g. macrophages), and an ability to escape trapping in the liver through increased target cell specificity.
                                                                                             Sequence

BEAT products can be used for producing plants with altered flavour and fragrance characteristics. BEAT nucleic acids can be used for increasing the synthesis of benzylacetate in a plant or for decreasing the benzylalcohol acetate content of plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a benzylalcohol acetyl transferase (BEAT) related protein from Clarkia concinna plants. BEAT products can be used for producing plants with altered flavour and fragrance characteristics. BEAT nucleic acids can be used for increasing the synthesis of benzylacetate in a plant or for decreasing the benzylalcohol acetate content of plant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 11; Page 148-150; 161pp; English.

The present sequence represents a PCR primer for a geranylgeranyl diphosphate (GGPP) synthase protein. GGPP synthase has cytostatic activity. A vector encoding GGPP synthase is useful in increasing GGPP synthase levels in a host cell preferably Taxus (Yew) cell and thereby facilitates production, isolation and purification of larger amounts of GGPP synthase in plants. GGPP synthase is useful in obtaining expression or enhanced expression of GGPP and other diterpenes, such as pacilitaxel, useful as anticancer drugs. Isolated nucleic acids encoding gGGPP synthase on hybridising with GGPP synthase encoding nucleic acids
                                                                                                                                                                                                 microorganisms such as Taxomyces andreanae and Penicillium raistrickii.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA constructs contg.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid encoding geranylgeranyl diphosphate is useful for producing paclitaxel and other diterpenes that are useful as anticancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Geranylgeranyl diphosphate synthase; GGPP synthase; yew; cytostatic; anticancer; Taxus; diterpene; paclitaxel; identification; plant; Taxomyces andreanae; Penicillium raistrickii; microorganism;
                                                                                                                                                                                                                                                        Vectors containing DNA fragments encoding proteins of plant origin
with aromatic acyl transferase activity may be used to transform
plants which produce anthocyanin pigments. The aromatic acyl
transferase acylates the pigments in the flower resulting in colour
                                                                                                                                         plants
                                                                                                                                                                                                                                                                                                                                     tone changes and allowing new colourations to be produced. Six specific DNA sequences encoding aromatic acyl transferase from different plants are described in 137308-1737313. This degenerate primer was synthesised base on a peptide fragment (W04728) isolated from three of the six clones. It was used to identify other aromatic acyl transferase encoding clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
